Specialists in Rapid-Response Reconditioning

Thames-based A&G Price Ltd has added a new service to its extensive engineering capabilities — cost-effective and on-site maintenance of industrial plants.

Familiarity with heavy mining, locomotive, and industrial equipment stretching back over 150 years — often as the original manufacturer — enables A&G Price to repair and recondition hydro turbines, roller mill housings, heavy presses, rock crushers, complete gearboxes and other demanding machinery economically and effectively. Often A&G Price will work with the client to incorporate design enhancements and material modifications as part of the refurbishment process.

Given the long lead times on the purchase of new heavy steel forgings and other replacement capital plants, the repair of legacy plants to 'as new' condition can prove a cost-effective solution, reducing down time and significantly extending the productive life of essential machinery.

Responding to emergency breakdowns, scheduled factory shutdowns or routine maintenance requirements, A&G Price's

engineering team is committed to working around the clock if necessary to assess, repair and test mechanical equipment with a minimum of client downtime.

Whether it is damage due to mechanical or thermal fatigue, corrosion, normal wear or acute overloads, the cause will be identified and a reconditioning solution will be devised to minimise such damage in the future.

A&G Price has developed processes to undertake vital time-sensitive maintenance and repairs with minimal disruption to work flow. A&G Price's team is able to make an on-site inspection, coordinate a shutdown over a weekend or other suitable off-peak period, and oversee the removal of client plants to its own workshops for refurbishment or repair.

As a fully integrated engineering works, A&G Price can undertake and project-manage all such remedial work in-house. By eliminating the need for sub-contractors, it is able to guarantee the high quality and timely completion of all projects.

Above Right: A&G Price engineers tackle a difficult refurbishment at Omya's calcium carbonate processing works in Te Kuiti

Below: The mining industry often calls on the company's skilled fitters, as here at the Martha mine in Waihi.
