

D E F E N C E

Internationally approved defence contractor

Track records speak for themselves. And as a supplier of high-quality components to some of the world's most demanding defence clients, A&G Price Ltd has built an outstanding reputation for technical expertise, quality of manufacture and on-time delivery.

It is a reputation that rests on the delivery of an impressive variety of components built to military specifications for ground, air and sea applications. These range from running gear for tracked vehicles to bomb-loader sub-assemblies and from aircraft missile storage containers to frigate operations room flooring, radar cooling modules and heat exchangers.

A&G Price brings to every contract a proud tradition of engineering excellence and innovation, frequently working with clients on the design and manufacture of components to create reliable, high-performance products.

The company developed and built prototype hydraulic steering coupling assemblies for an all-terrain tracked carrier in conjunction with Singapore Technologies Kinetics Ltd, modifying the initial concept to simplify manufacture and reduce costs.

For the same client, A&G Price refined the design of armoured personnel carrier track running componentry, adapting idler wheels to fit a wide track, altering moulds to improve casting quality and developing special high-tensile alloy steels. The company's metallurgists also formulated a special grade ballistic steel for the vehicle backing plates.

Meticulous quality control is a cornerstone of A&G Price, with all internal processes independently monitored by TELARC, the New Zealand National Quality System Accreditation Authority. The company was the first heavy engineering works in New Zealand to achieve ISO 9002 accreditation.

Hydraulic deck winches for Singapore

The work for Singapore Technologies Kinetics resulted in A&G Price becoming the first New Zealand company to receive a prestigious Quality Award from the Government of Singapore in recognition for the on-time delivery of thousands of vehicle components over a period of six years without a single fault.

The fact that A&G Price is a fully integrated manufacturing facility, with state-of-the-art foundry, machining and fabrication capabilities, means that all defence contracts are undertaken in-house. And with jobs monitored, controlled and documented at every stage of manufacture, from design to delivery, traceability is assured.

Given such strengths it is little wonder that A&G Price enjoys a growing reputation as a preferred defence contractor in the Asia-Pacific region and beyond.
